Challenges with ggplot2 changes

- `+.gg` S3 method being overwritten
  - Issue ([#292](#)) written down in 2018
  - Proper fix in 2025

- ggplot2 v4.0.0 had MANY internal changes to use S7
  - I feel lucky that I could make the updates during work time

- gtable (underlying package to print) layout changed over the years
  - Each change was welcomed
  - Each change was a pain to fix

- ggplot2 major/minor releases typically break all snapshots

Long term maintenance
GitHub

- Thank users who post Issues or make Pull Requests

- Post Issues on the GitHub repo! (🙋 guilty)

- Closing Issues that will never be implemented (🙋 guilty)

- Use Conventional Commits for (at least) Issue and PR titles
